

The Met Office, Exeter.

Ideas at work.

Essential services for business, delivered with energy.

Predictability. That's what the Met Office seeks every day. Pulling live weather data from hundreds of thousands of locations across the globe, their computers perform over 1,200 teraflops* to give the world better forecasts. That's why the resilience of their power systems and data networks are critical.

We've been working with the Met Office since 2006. As you might predict, their supercomputers place serious demands on infrastructure – and not just in terms of heavy current. Millions of customers and people around the world rely on the Met Office. In turn, hundreds of their scientists depend on us for robust power systems and reliable data networks. We're experienced in high voltages and big data, but we're also at home with high security. And, like the Met Office itself, we're always ready for tomorrow's challenge – whether that's developing smart lighting or reprogramming a handset.

* A teraflop is a trillion calculations per second.

What did the world's leading weather forecaster need to cover all kinds of contracting at their head office? An umbrella organisation, of course.

SSE Enterprise is no ordinary business partner. For a start, we're part of one of the UK's leading, longest-established energy companies. (The one that's also the UK's biggest 'living wage' employer.)

Let's say you need to handle heavy load, safely and effectively? No problem. We've been building serious networks since the 1950s.

A contractor for all seasons

For the Met Office, we're proud to provide a host of essential services:

- HV / LV infrastructure
- AC / DC trunking and cabling systems
- Compliance works (inc. fixed wiring and HV testing)
- Fibre optic and copper IT networks
- Campus wide blown fibre network
- WiFi network and data and voice cabling

Today, we also have specialists in areas that once seemed like science fiction.

High powered data centres and smart reliable energy networks are now key priorities for many organisations.

That's why an important global player like the Met Office places its trust in us.

Beneath the umbrella of SSE Enterprise, we provide technical leadership, expert delivery and integration across a wide spectrum of contracting and telecoms.

End to end solutions

High voltages. Low voltages. Utilities. Data networks and ICT. Telecoms. All kinds of mechanical and electrical engineering. From installing a bus bar to fixing a leaky pipe, we aim to make your working life easier. But resilience and reliability are not the only benefits.

New ideas, technical expertise and our unique safety culture combine to reduce risks and bring added efficiencies to every project.
