

The SSE Hydro, Glasgow.

# Ideas at work.

Essential services for business, delivered with energy.

**Glasgow Harbour is a 20 year regeneration programme. This ambitious masterplan brings leisure, commercial and housing development to the city's riverside. SSE Enterprise invested in the gas and electricity network, giving the area its world class 'get up and glow'.**

Unlikely as it seems, the world's music scene is lit up by a major attraction nestling by the river Clyde.\* Energised by high voltage connections developed by SSE Enterprise, the venue can shift from its light baseline load to 4MW for a high-powered pop performance. As for many commercial organisations, energy is a critical function in show business. Audiences can enjoy the show with confidence because the venue itself enjoys a resilient power supply. But that's not the only kind of security we give you. We can also offer flexible energy contracts to help your business plan for the future.

\* Ranked 2nd in 'Top 100 Worldwide Arena Venues' review by Pollstar (2015).

## We're bringing a world of entertainment to one of the UK's biggest cities, delivering the kind of energy it takes to power a small town.

SSE Enterprise is no ordinary business energy and utilities infrastructure provider. We provide a unique end-to-end service, backed by a deeply ingrained safety culture.

We're proud to be part of re-energising Scotland's biggest city. The project includes 1,500 new homes by the river, along with stunning public spaces and commercial/retail development.

### Harbouring the power

For the Glasgow Harbour masterplan, we're proud to provide a host of essential services:

- HV connections/ LV cabling
- Domestic connections
- Civil works and gas networks
- Safety, legal and compliance
- Smart financial packages

We have developed the high voltage connections in the area.

We've energised iconic buildings such as The SSE Hydro, designed by Foster Associates, and Riverside Museum, designed by Zaha Hadid. And, from the Clyde to Partick, we've invested in infrastructure for gas and electricity.

### Seamlessly connected

As an SSE Enterprise customer, your business benefits from our powerful insights into energy markets.

Our recommendations are backed by over 50 years' expertise in energy development and a deep understanding of energy regulation – from the UK's Energy Act 2013 to the EU's Energy Efficiency Directive 2012.

At a practical level too, in-house expertise matters. For example, in bringing utilities infrastructure across third party land, the experience of our legal team can make a difference on tricky wayleave issues.
