

Data sheet

Data & voice cabling

In today's competitive global markets, the right communication networks are essential to your organisation's success. Our data and voice cabling infrastructure services provide the perfect solution to support your business both now and in the future.

As an independent provider we recommend the best solutions to suit not only your immediate needs, but your longer-term goals as well.

Our future-proof infrastructures are designed to adapt to the technologies of tomorrow without adding an additional layer of cost.

This is a major investment. We expect you to be able to rely on your new infrastructure for at least the next 15 years. Careful planning and implementation are critical to extending its lifespan.

Our high standards of infrastructure design, project management and engineering mean your cabling installation will meet rigorous quality and health and safety criteria. You can also feel confident in the knowledge that we provide 24-hour maintenance support across all of our services as standard.

Features

Quality control

- > As an independent provider we choose the right market-leading products to meet the needs of even the most demanding projects
- > Our large engineering team based all over the UK, provide flexible resource for projects of all sizes

Copper cabling

- > Standard desktop links are made using low-cost twisted-pair copper cabling, in either unshielded or shielded (UTP or STP) formats

Fibre optic cabling

- > Fibre optic cabling offers a much greater bandwidth for faster data transfer and greater data security
- > Fibre optic is the preferred solution for inter-building links and other connections beyond the maximum 90m rule for traditional copper cabling
- > It's usually needed for backbone connections between localised networking equipment

Preventative maintenance

We'll work with you to schedule maintenance for all telecoms assets throughout the year - this approach helps reduce reactive call-out charges and network failures.

We provide preventative maintenance and remedial repair for:

- > Generators
- > Uninterrupted Power Supply (UPS)
- > Direct current rectifiers
- > Air conditioning
- > Periodic electrical testing
- > General building and room maintenance
- > Grounds maintenance
- > Pest control

24-hour nationwide call-out

If an unplanned incident was to occur our engineers are available on-site 365 days a year to investigate and resolve issues including:

- > Fibre optics
- > UPS repairs
- > Generator repairs
- > Air conditioning repairs
- > Temporary mobile generator deployment

Our engineers are available 365 days a year to investigate and resolve issues.
