

Car parks

The safety of car park users and the security of their vehicles rely on effective lighting.

We offer the full range of project management, consultancy, design, installation, electrical connections and maintenance services.

We understand that delivering this service cost efficiently and in line with environmental regulations can be quite complex, not least because of all the varying usage patterns and external conditions.

We are the largest external lighting contractor in the UK and Ireland, with many years of experience in the design and installation of car park lighting. This means we offer you the insight and technical expertise needed to create a low maintenance solution that provides the right levels of illumination, at the right time.

We can even provide energy saving modelling and advice to ensure the system operates to optimal effect, night and day.

Core services

- LED internal and external car park lighting
- Security and lux levels
- CCTV
- Automated Number Plate Recognition (ANPR)
- Real Time Passenger Information (RTPI)
- Variable Message Signs (VMS)

Flexible lighting control and energy efficiency

Our approach covers a comprehensive range of solutions, including central management systems, LED white lighting to help with clarity of CCTV and vandal resistant features. These options can be combined with flexible lighting control, providing a sustainable lighting option.

Nationwide coverage, local service

With a network of offices throughout the UK and Ireland, we provide a consistent, local service with direct contacts wherever your parking facility is located. Large or small, all schemes are treated equally; we design, install and maintain car park lighting schemes of all sizes.

Working together

We will work closely with you to design a scheme specifically for your car parking facility.

We have created solid partnerships with many other car park facility owners, built upon honesty, openness and co-operation.
