

Sports facilities

**Players and spectators alike expect a well-lit view of all the action and getting the lighting right is essential; however it can be challenging to do so whilst meeting budgetary, regulatory and safety constraints.**

**We offer you the full range of services – design, project management, installation, electrical connections and maintenance.**

Within sports facility lighting, we have real knowledge and expertise, but also a dedication to creating lighting schemes that aim to add to the enjoyment and safety for participants and viewers whilst helping to reduce energy cost.

You can trust our extensive, end-to-end capabilities to handle every stage of your lighting scheme, from design to installation and connection.

### **Quality, safety and efficiency**

Safety is one of our core company values and we rigorously apply Health and Safety policies and management systems to reduce risk at every stage of a project. Our lighting engineers are all fully qualified and equipped to work at height.

The quality of our lighting installations focus on creating and maintaining optimum lighting levels for participants and spectators alike, while minimising light pollution and glare.

Our procurement processes and work methods ensure effective management of time and resources. We work to strict budgets and timescales, and schedule works carefully to avoid disruption to users of your facilities.

### **Nationwide coverage, local service**

With a network of offices throughout the UK and Ireland, we give you a consistent, local service with direct contacts wherever your sports facility is located.

We can design, install and connect sports venue lighting schemes on any scale and if required, maintain them on an ongoing basis.

We have created solid partnerships with many other sports and events facilities, built upon honesty, openness and co-operation.

### **Energy and cost savings**

We will work closely with you to design the most effective and sustainable lighting solution. Our approach is tailor made to ensure the correct lighting levels are available for every forecasted use of the facility (including low energy lighting for safe entry and exit), whilst also minimising light pollution and glare.

We implement technological innovations including LED white lighting, Central Management Systems (CMS) and energy saving opportunities through an "Invest to Save" financing methodology.
